

# Aptitude Fynapse & Microsoft Dynamics 365 Finance

Dynamics 365 Finance and Aptitude Fynapse allows finance teams to achieve more with less through increased automation, process simplification and more connected financial data to drive better insights and decision making.

Finance as a function is under significant pressure to shift from reporting and accounting for past activities to a strategic transformation enabler that can harness data to provide actionable insights to the business. CFOs and their teams must find a way to perform better, act faster, and reduce the cost of finance.

The integration of Dynamics 365 Finance and Aptitude Fynapse provides clients with a single source of truth for financial data to accelerate close processes, improve compliance, and enhance audit controls. Finance teams can then focus on business strategy versus managing time-intensive data consolidation, policy management, and transaction processing.

Fynapse is an Azure-deployable, enterprise accounting rules engine and subledger platform for clients with accounting and finance architecture complexity and significant volumes of data. Fynapse delivers enhanced automation, control, and access to valuable data and insights while reducing manual work and the overall cost of finance.

Top finance function challenges	Why Dynamics 365 & Aptitude's Fynapse
Data silos and lack of real-time access to the most granular financial data	Match the real-time visibility into operations and financial performance, analytics and graphic visualizations you get with D365 with the deeper data granularity and drill-back capabilities provided by the Fynapse subledger.
Agility and flexibility to react to changes in regulatory, market and business environment	Empower finance teams with the ability to build accounting rules to accommodate new products, business models or regulatory requirements – all in a highly controlled environment.
Manual, resource-intensive, IT-dependent close processes	Run a globally consistent, fully automated close process that allows finance to continually monitor their period-end close for additional flexibility and risk mitigation.
Automation and operational excellence	Maximize the value and performance of cloud technology, significantly reducing total cost of ownership and providing the flexibility to support evolving business needs. Increase performance through tight integration, cloud-native architecture and IP-rich APIs.

### Perform better

Tight integration, cloud-native architecture and IP-rich APIs provide extreme performance, scalability, and data transparency.

### Act faster

Finance users are fully empowered to configure rules in a non-code environment while instant processing of data queries reduces time to insights.

### Reduce the cost of finance

Provide a compelling total cost of ownership story for both finance and IT departments.
