RevStream 5X Suite

RevStream For Oracle

RevStream's enterprise revenue lifecycle management suite is the only advanced revenue recognition automation solution that is seamlessly integrated with both Oracle E-Business Suite and Oracle Fusion Financials Cloud applications.

OVERVIEW

RevStream has been delivering revenue recognition solutions to Oracle customers for over 8 years - the longest in the industry. The maturity of our Oracle integration, RevStream's deep Oracle expertise, and Oracle Gold Partnership combine to provide Oracle customers the most complete enterprise revenue lifecycle management solution in the market.
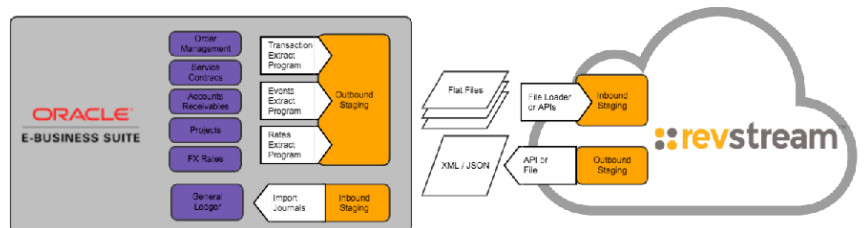

Oracle customers are able to leverage their existing investments and configurations to achieve a complete end-to-end solution for revenue management, from arrangement management through revenue recognition and posting in Oracle General Ledger — a streamlined and automated process that is accurate, efficient, and maximizes the investment in enterprise software to power their business.

BENEFITS

- Configurable integration with Oracle allows for rapid deployment
- Can support Oracle customizations
- Toolkits to build integrations to custom or legacy non-Oracle applications
- Single sign-on and authentication support for secure access through Oracle, OneLogin, Azure SSO, or your internal LDAP and active directory solutions.
- RevStream's Oracle integration supports all Oracle deployment models, whether its Oracle On-Premise, Oracle On Demand, Amazon Web Services, or through third party hosting providers.

HOW IT WORKS

RevStream provides configurable inbound and outbound integration with Oracle E-Business Suite and Oracle Financials Cloud applications. The RevStream platform can automatically extract transactional and event records from Oracle E-Business Suite columns within Oracle modules applicable to revenue recognition. Outbound integration enables RevStream to write revenue recognition entries for deferrals, carve-outs, allocations, amortization, true-ups, and recognition to Oracle General Ledger, either directly or via sub-ledger accounting.

KEY FEATURES

Inbound Integration from Oracle to RevStream

RevStream loads contracts with customers from the following modules:

- Order management
- Receivables
- Projects
- Service contracts
- General ledger

RevStream loads evidence of fulfilling performance obligations from the following modules:

- Order management
- Shipping execution
- Receivables
- Installed base
- Projects
- Service contracts

RevStream loads COGS, expense, provisions, and adjustments from the following modules:

- Inventory
- Purchasing
- General ledger

RevStream synchronizes master data from Oracle to support the revenue recognition process, allowing the ERP to remain the single source for organizational data:

- Ledgers
- Chart of accounts
- Periods
- Calendars
- FX rates
- Organizations

Outbound Integration from Oracle to RevStream

RevStream's powerful revenue accounting engine provides support for complex multi-currency environments and complex accounting structures.

RevStream can create summary or detail journals and send to general ledger or sub-ledger accounting to support the following accounting processes:

- Revenue deferrals
- COGS and expense deferrals
- Debundling
- Allocations and carve-outs
- Revenue netting
- Receivables
- Tax

- Revenue recognition
- Unbilled revenue
- FX gain/loss
- Short term/long term classification
- Sales units and STAT entries
- Revenue reversals
